

Incident Report Review

Report Number: 20240201-37B01-2147341333

Who you are: Public Safety Entity

Step 1: What Happened

What Happened:

Lead Safe Mama, LLC is an advocacy organization for Consumer Goods Safety and Childhood Lead Poisoning Prevention. Our website is LeadSafeMama.com. We had approximately 2.5 million readers in 2023. Our readers and community members (around the world) report potential product issues (primarily related to concerns for Lead exposure) that they encounter. We follow up on these issues to determine if the product(s) in question are safe - or if they are a violation of the Consumer Product Safety Improvement Act of 2008. - As you may have seen in the news cycle this past week, following up on our discovery of unsafe levels of Lead in the insulated Stainless Steel products made by Cupkin (which the CPSC subsequently recalled in July of 2023) In 2023, and following up on our discovery of unsafe levels of Lead in the Green Sprouts insulated Stainless Steel baby bottle products (which the CPSC subsequently recalled in November of 2022) we were sent Stanley Tumbler products to test for Lead. While many of these products are being used by children, the specific products that we evaluated in 2023 (as far as we were aware at the time) were sold for use by adults. - We have (since March of 2023) determined that Stanley also sells products marketed for use by children (see attached images), products which have the same unsafe levels of Lead (and same failure mode / Lead-exposure pathway) as the Stanley products made for use by adults. The Lead found in these children's products is in an area that becomes exposed with normal use of the product as intended. Specifically, Lead Safe Mama, LLC community members have reported the stainless "discs" (which are glued on over a 40-60% Lead sealing dot) falling off of the bottom of their Stanley products (products intended and sold for use by children) within two weeks of purchase (to up to 6 months after purchase). - Using XRF technology (a Niton XL3T, the same instrument historically used by the CPSC for screening consumer goods), Lead Safe Mama, LLC determined that the Lead solder used in these children's products is in the range of 400,000 ppm Lead (possibly as high as 600,000 ppm Lead) - an amount which is far in excess of the CPSCIA's limit of 100 ppm Lead for the substrate of any item intended (and marketed and sold) for use by children. - No known injuries have occurred yet - but given the ubiquitous nature of these highly Lead-contaminated products, the potential for injury (via Lead exposure of children) is high.

When it happened:

1/1/2024

This is an estimate

Where it Happened: Home/Apartment/Condominium

The address where it happened:

United States

Step 2: Tell Us About the Product

Describe the product

We are specifically aware of the Stanley brand product "The Wild Imagination Iceflow Flip Straw

Tumbler" in all colors and sizes having an unsafe level of Lead (in the bottom seal that creates the vacuum of the product) that becomes exposed with normal use as intended, when used by children. We have not evaluated other children's products manufactured and sold by Stanley (for the presence of Lead), but we anticipate that all of their insulated stainless steel products made for children have the same defect and all of these products should therefore be recalled. - We also request that the CPSC evaluate Stanley's sales practices related to their products sold for use by adults. The 40 oz Stanley Tumbler Quencher products (manufactured for use by adults) are being used by children across the United States (and beyond) because there is no warning at all (to our knowledge) that they are only designed to be used by adults. Should Stanley continue to manufacture Lead-contaminated products for use by adults we request that the CPSC mandate that these products have a warning notation on the product (printed on the base / bottom of the product where they currently have the words "Ethically Manufactured" printed) and on the packaging clearly indicating that these products are not intended for use by children as they contain unsafe levels of Lead.

Brand name: Stanley

Manufacturer/ Importer/ Private Labeler Name: Stanley / Stanley 1913 / Stanley PMI

Please provide Model Name or Number: All insulated stainless children's products

Serial Number: all

SKU#: all

UPC Code: all

Date Manufactured:

Manufacturer Date Code: all

Upload photos or documents related to the product, damage, or injuries

Address on the product

Website On Product:

<https://www.stanley1913.com>

Telephone Number on the product:

Still have the product:

Yes

Product was damaged or modified:

No

Explanation of damage/modification:

Product was damaged with normal use as intended.

Contacted the manufacturer:

Yes

Step 3: Tell Us Who Was Involved

Person #1

Injury Information:

No Incident, No Injury

Relationship to me:

Years:

Months:

0

Date of Death:

First Name:

All Children Who

Last Name:

use this product are at risk

Email:

Phone Number:

Gender:

Races:

Hispanic/Latino:

Address:

Step 3.5: Tell Us the Case Details

What is the case number:

LSM 2024_001

Case Documents/Photos:

File Name	Description	Size

Who are the Principal Investigator(s) of the case you are reporting:

Tamara Elise Rubin - Owner, Lead Safe Mama, LLC

Step 4: Tell Us How to Contact You

First Name:

Tamara

Last Name:

Rubin

Organization / Agency:

Lead Safe Mama, LLC

Email Address: tamararubin@mac.com

Phone Number: 415-609-3182

Address:

7933 SE 15th Avenue

Portland

Oregon

97202

May we release your name and contact information to the product manufacturer / importer / private labeler?

Yes
